

Announcing Utilidex Energy.Hub for Generation

The Utilidex Generation product is part of an integrated SaaS solution built on the Microsoft Azure Cloud harnessing the latest technologies for security, scalability, and innovation. As an ISO27001 accredited company with 10+ years of experience in supplying the largest energy participants in the UK, we are trusted by leading energy customers, consultants and suppliers to deliver our robust and constantly evolving solutions.

Advantages

Capturing key data for generators/PPAs/off takers

- Capture trades for flex contracts & complex UK trading instruments such as OTC & EFA
- Create daily or half-hourly demand forecasts for improved granularity
- Import several major price sourcing data within the UK, e.g., Heren, Spectron, LEBA, EPEX, Elexon

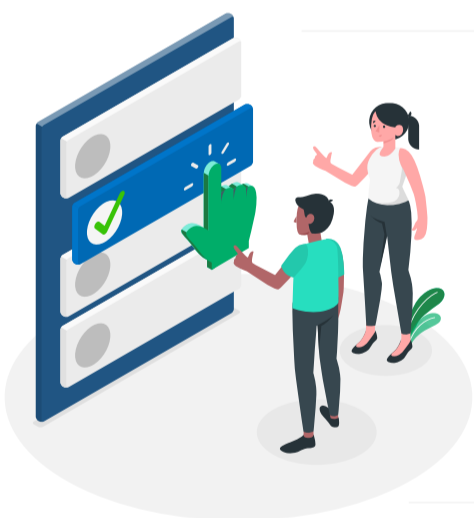

Revenue assurance: trade reconciliation

- Upload counterparty trades and let the system automatically check volume and prices against the benchmark
- Easily spot issues and errors to raise exceptions where trades breach tolerances

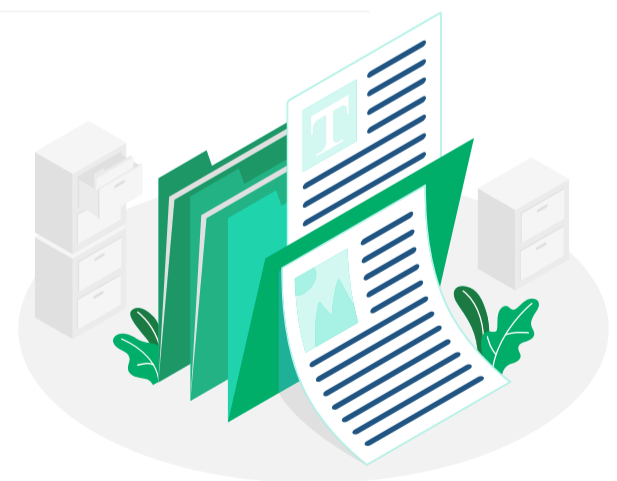

Derived forward curves & price benchmarks

- Create your own forward curve or use a derived curve from a series of underlying price sources
- Benefit from the system generated price benchmark curve allowing users to compare different price indexes and evaluate counterparty trades

Reports to assist key business processes

- Manage counterparty credit and exposures with mark to market & credit exposure reports
- View key info in a range of data visualisers and dashboards, with the capability to export all key data sets from the system through a downloadable excel, database or API

Create generation/PPA invoices & statements

- Configure any PPA, line item and tariff using the in-built tariff manager
- Generate invoices & statements in a formatting and style according to your company brand
- Export key billing and accrual data to major ERP systems
