

Announcing Utilidex Energy.Hub for Advanced Energy Billing

Bringing together all your customers key energy data into one central platform accelerating bill creation while digitalising your customer's experience with a customisable portal and empower their consumption, carbon and cost journeys with access to various energy management and carbon reporting tools.

Advantages

Reduce billing errors

- Highlight & flag meter data discrepancies with Data Aggregators
- Manage all CoTs, Novations & Site changes
- Customisable tariffs, components and rate management

Automate energy rate calculations

- Import energy and green certificate trades to calculate the weighted average cost of energy
- Import key price indices and cash out prices to calculate residual and shape costs in full
- Automatically compile the energy rate based on contractual parameters
- Store DUoS charges and generate time of use HH costs and losses

Accelerate bill processing

- Calculate customer bills and accruals in bulk
- Generate monthly energy bills and share with customers
- Download highly granular data to reduce false positives relating to bill disputes

Integrated with financial systems

- Secure interfaces with trusted financial systems reducing manual processes
- Automatically integrate key financial data with your financial systems and publish bills and statements
- Apply controls and checks to ensure your accounts balance

Automate your billing adjustment

- Deploy a rigorous versioning of historical data
- Support adjustments caused by rate data and consumption data reconciliations, and perform transmission (TRIAD) reconciliations
- Assist in automatically creating revised and socialised costs across the industry
